From oil fields to delivery rooms, I design systems that work when it matters most. Five years across healthcare, industrial field operations and government design systems. Immediately available for full-time, contract and remote roles.

EXPERIENCE

Freelance Product Designer · Independent practice, remote

Feb 2023 – Present

- Designed MOMents, an AI-powered pregnancy wellness app for a seed-stage startup: led end-to-end UX from 8 user interviews and a 4-app competitor audit to a 6-screen hi-fi prototype and full design system in 10 weeks (Dec 2025 – Feb 2026).
- Delivered 3 further projects across web design, interaction design and Framer development, owning research, wireframes, hi-fi design and developer handoff on each.

UX Designer · Capgemini, Jaipur

Jul 2021 – Jan 2023

- Built a government design system for ADAFSA on the UAE's TAMM platform as the Capgemini designer embedded with the client team: consolidated 34 hardcoded colours into 9 tokens and shipped 20 components with 87 variants, Arabic RTL support and full Figma documentation.
- Redesigned Baker Hughes' asset management platform for offshore field engineers: split a 40+ field registration form into 3 guided sections with specific inline validation, and delivered annotated specs covering around 20 interaction rules to cut design-to-build guesswork.
- Led UX for MediScribe, an AI consultation scribe for Capgemini's internal health clinic: a doctor interface that asks for nothing mid-consultation, plus a patient app with plain-language visit summaries.
- Improved signup conversion by 37.5% by redesigning a core onboarding flow with clearer hierarchy, inline validation and fewer fields.
- Consolidated duplicate internal tools used by Sales, Operations and Engineering into a single platform by running cross-functional alignment sessions.
- Owned design system governance, usability testing, design QA and developer handoff across concurrent product tracks.

Visual Designer · Micromax (live industry project, Pearl Academy)

Aug 2020 – Jan 2021

- Redesigned the UI system for smartwatch and earphone companion apps on Android and iOS, with consistent interaction patterns and an updated visual language.
- Tested earphone compatibility and EQ visualiser behaviour across device variants, resolving edge cases before production release.

SKILLS

Design	Product design, UX/UI, interaction design, design systems, prototyping, wireframing, responsive design, accessibility, visual identity
Methods	Usability testing, stakeholder management, developer handoff, design QA, AI-assisted design
Tools	Figma, Framer, Sketch, Webflow, Adobe CC, Miro, Notion, Google Analytics

EDUCATION

Pearl Academy 2017 – 2021
Professional Diploma in Communication Design, Interaction Design specialisation. Pearl Excellence Award.
